

Felipe Jacheto

Senior Data Engineer

About me

Armed with an Engineering degree, I embarked on a career as an IT Consultant, delving into varied areas including Full Stack Software Development, Process Automation, and Web Development. My path ultimately led me to discover a profound passion for data.

Now, I see myself as a catalyst for the data maturity journey, employing a hands-on approach to craft robust data architectures, data pipelines, and insightful dashboards, while constantly evolving the data governance along the way. I'm specialized with the Microsoft package.

Career

Data Engineer at Toptal, USA [Remote job](#)

May 2022 – Present

- Power BI Expert – Building dashboards across different departments in the organization while continuously changing the reporting culture of the company.

Data Engineer at Visagio, São Paulo, Brazil [Remote job](#)

January 2020 – April 2022

- One of the leaders of the Data Learning Organization inside Visagio. I contribute by studying, creating institutional presentations, productizing solutions, presenting classes, publishing internal papers, creating and selling data projects proposals to clients, and trying to help other projects as much as I can, in any way possible, to correct the direction and accelerate the journey to data driven.
- Manage project delivery at business units.
- Manage people development and technical skills development.
- Helped to escalate data architecture in a project to support a fast-growing team without losing quality or standards.
- Built over 20 Power BI dashboards.
- Built over 50 data pipelines as a Data Engineer and integrated over 20 different sources.
- Gave technical support in an Azure Data Infrastructure project, solving over 400 tickets in one year.

Intern as Technology Consultant at Visagio, São Paulo, Brazil

September 2017 – December 2019

- Built business reports using Data Visualizations tools such as Power BI and Excel.
- Mapped business processes at Supply Chain department.
- Automated business processes and implemented over 30 software robots.
- Designed and developed a C# based system to orchestrate workflows of human and robot activities.

Education

Exchange Study in Electrical Engineering at Waterford Institute of Technology (WIT), Waterford, Ireland

January 2017 – June 2017

Bachelor's Degree in Control and Automation Engineering at Instituto Mauá de Tecnologia (IMT), São Caetano do Sul, Brazil

January 2014 – December 2019
